

Video- and Audiostreaming

We offer high-quality streaming solutions for live broadcasting your meeting, press conference, product presentation, training or any event on the Internet, for 25 up to 2.500 simultaneous viewers, also in HDTV quality and with synchronous audio.

Due to the unique 1000eyes technology no further hardware is required beside the camera and a broadband Internet connection (DSL, TV-cable, glass fiber or EDGE/UMTS), which makes the solution comfortable, flexibly and easy to operate. The camera holds a tunnel connection to the 1000eyes-Server in the data centre. **There is no need to setup portforwardings, static IP addresses or DynDNS. This ensures a performant and failsafe streaming, contrary to other streaming solutions available on the market.** Except connecting the camera with the Internet and power nothing has to be done locally. We take care of all other things.

The Streaming servers of 1000eyes are located in German data centres and have Gigabit connections to the Internet. The servers distribute the Livestream of your camera in real time to the viewers, if you wish also with audio. This ensures that - no matter how many viewers watch at the same time – everyone sees pin sharp pictures at full frame rate. The Internet connection which the camera is using locally is burdened with only one connection, no matter how many viewers are watching.

Streaming advantages of 1000eyes

- Secure and encrypted tunnel connection. No portforwarding or DynDNS necessary.
- Comfortable control of your Pan-, Tilt-, Zoom via webbrowser.
- Standardized packages without traffic limit. No subsequent charges.
- Individual business packages with services like e.g. Ad serving (VAST), Recording, 360° Panorama, delayed streaming (for safety shutdown in case of unforeseen events on camera location) etc.
